Volume 159 Subject Index

A

Abstract properties of individuals, analysis for emergence, 687
Acer platanoides, growth along a gap-understory continuum, 318
Aculeovinea yunguiensis gen. et sp. nov., 1023
Acyl carrier protein, Arabidopsis, 533
adherent1 mutant, organ and cell fusions, 695
Agalinis spp., flower development, 418
Agropyron cristatum, carbon isotope discrimination, 821
Allometry, 318
Alpine populations of *Polygonum viviparum*, clonal diversity, 606
Anatomy: C_3, C_4 Cyperaceae 480, cuticle cracking in tomato 14, ontogeny of barley leaf vascular bundles 716, *Pinus palustris* needles grown in elevated CO_2 1002, *Wolffia* 297
Androdioecy, *Fraxinus lanuginosa*, 941
Anther smut see *Microbotryum*
Apomixis, pearl millet, 89
Apple see *Malus domestica*
Arabidopsis thaliana: acyl carrier protein 533, epicuticular wax structure and chemical composition, 773
Araucariaceae, Wollemia nobilis, 160
Artemisia tridentata, hybrid zone, 139
Aster spathulifolius, genetic diversity, 148
Auxin-modulated membrane activity, 105
Axillary development, *Malus domestica*, 283

B

Backcross, apomictic *Pennisetum glaucum*, 89
Barley leaf vascular bundle ontogeny, 716
Biochemistry, protein disulfide-thiol interchange, 105
Biological activity, essential oil, 31
Biomass allocation, effects of seed heteromorphism, 637
Biomass partitioning, 318
Blandfordia grandiflora, inbreeding depression, 98
Blumeria graminis, extracellular matrix, 575
Book review: The origin and early diversification of land plants: a cladistic study 172
Boron, role in nitrogen metabolism, 121
Brassica napus, lipid accumulation in tapetal cells, 724
Brugmansia suaveolens, RER in incompatible pollen tubes, 738
Bryophyte, surface layer similarities to vascular plant cuticless, 780

C

Cantharellus, carotenoids, 244
Carbon isotope discrimination, *Agropyron cristatum*, 821
Carotenoids, Cantharellus, 244
Catananche lutea, reproductive biology, 637
Cathaya argyrophylla, population genetics, 351
Chalazogamy, *Pistacia vera*, 566
Charophycean algae, surface layer similarities to vascular plant cuticles, 780
Chloroplast proteins, nuclear-encoded, 23
Citrus limon: genotype identification 864, secretory cavity 75
Clonal diversity, *Polygonum viviparum*, 606
CO_2, elevated, *Pinus palustris* needles 1002, photosynthetic decline of *Triticum* flag leaves 798
Collagen, fungal fimbriae, 173
Conifer: *Cathaya argyrophylla* 351, Triassic 358
Conservation: *Cathaya argyrophylla* 351, *Gaura neomexicana* 853, *Ophiopogon xylorrhizus* 440
Coryloideae, Paleocene, 522
Cotton see *Gossypium hirsutum*
Crested wheatgrass see *Agropyron cristatum* 821
Cretaceous fossils, comparison with *Wollemia* nobilis, 160
Cucurbita pepo, effects of temperature during microsporogenesis, 616
Cuticle cracking in tomato, 14
Cuticle micromorphology, *Podocarpus*, 923
Cuticle, similarity to surface layers of charophycean algae and bryophytes, 780
Cyperaceae, quantitative leaf anatomy, 480
Cytology, *Paspalum*, 153
Cytoskeleton, stability in *Gossypium hirsutum* fiber initiation, 590

D

Demographic variability, *Gaura neomexicana*, 853
Development: acyl carrier protein 533, *adherent1* maize mutant 702, analysis for emergence 687, *Brugmansia* pollen tube rough endoplasmic reticulum 738, *Citrus* secretory cavities 74, *Eucalyptus cinerea* lignotuber 979, fluctuating asymmetry 559, *Glycine max* fasciation mutation 249, *Gossypium hirsutum* fiber initiation 590, inositol 1,4,5-triphosphate receptor 750, *Lepidium* flower 65, lipid accumulation in *Brassica napus* tapetal cells 724, *Malus domestica* shoot growth 283, *Myrsine laetevirens* seed 762, *Phacelia tanacetifolia* endosperm 753, *Pistacia vera* pollen tube pathway 559, procambial initiation 46, protein trafficking 39, restoration of juvenility in maize shoots 695, *Rhus hirta* flowers 539, *Sauromatum* pollen wall 744, *Scaphochlamys kunstleri* inflorescence and flower 261, synthetic seed technology 968, *Thelypteris palustris* vein formation 275, tracheid structure 881, tropical shallot flower 57, vascular bundle ontogeny in barley leaf blade 716, *Wolffia* 297, *Zizania palustris* flowers 550
Differential display, hyphal-specific gene, 206
Dioecious flower development, *Rhus hirta*, 539
Disease frequency, *Microbotryum violaceum*, 228
Drought stress, *Glycine max* responses to short-term light reductions, 805

E

Ecology: effects of woody plants on microclimate 1010, hybrid zone 139, island genetic diversity 148, salt tolerance 127
Ecophysiology: *Pinus palustris* growth in elevated CO_2 1002, prey-deprived *Nepenthes rafflesiana* 996, *Sasa senanensis* functional leaf phenotypes 812
Endexine, *Sauromatum* pollen wall, 744
Endosperm development, *Phacelia tanacetifolia*, 753
Epicuticular wax, correlation between structure and chemical composition, 773
Erythroxylum spp., localization of tropane alkaloids, 492
Essential oil composition, *Plectranthus madagascariensis*, 31
Eucalyptus cinerea, lignotuber bud development, 979
Evaporation, effects of woody plants, 1010
Evolution: analysis for emergence 687, Hamamelidae phylogenetics 891, *Nothofagus* staminate flowers 906, tracheid structure 881
Evolutionary significance of zymograms, *Sorbus aucuparia*, 627
Extracellular matrix, *Blumeria graminis*, 575

F

Fagaceae, Late Cretaceous, 391
Fasciation mutation, *Glycine max*, 249
Fern, Lower Cretaceous, *Gleichenia chaloneri*, 870
Fern vessels, Osmundaceae and Schizaeaceae, 788
Fiber initiation, *Gossypium hirsutum*, 590
Fimbriae, fungal, 175
Flax see *Linum usitatissimum*
Flow cytometry, *Citrus limon* genotype identification, 864
Flower development: *Agalinis* spp. 418, Haemodoraceae 466, *Mendoncia* 446, *Nothofagus* 906, *Ocotea tenera* 405, *Pseudocalyx* 446, *Rhus hirta* 539, *Scaphochlamys kunstleri* 261, *Thunbergia* 446, *Zizania palustris* 550
Flowers, lauraceous, Cenomanian, 668
Fluctuating asymmetry, 559
Foliar reflectance, *Nepenthes rafflesiana*, 996
Fraxinus lanuginosa, reproductive biology, 941
Freezing temperature, methods of estimating, 513
Freezing tolerance, *Pennisetum* spp., 599
Functional leaf phenotypes, *Sasa senanensis*, 812
Fungi see *Blumeria graminis*, *Cantharellus*, *Glomus*, *Microbotryum*, *Phanerochaete chrysosporium*, *Ustilago*
Fusion, organ and cell, *adherent1* mutant in maize, 695

G

Gaura neomexicana, demography, 853
Genetic analysis of zymograms, *Sorbus aucuparia*, 627
Genetic diversity, island and mainland populations, 148
Genetics, *Ustilago violacea* transposable elements, 1018
Gigantopteridales, Upper Permian, 1023
Gleichenia chaloneri, Lower Cretaceous fern, 870
Glomus, spore and hypha ultrastructure, 581
Glycine max: fasciation mutation 249, fluctuating asymmetry as a biomonitor of stress 559, nitrate uptake rate 305, responses to short-term light reductions 805
Gossypium hirsutum fiber initiation, 590
Growth regulator, seed germination and salinity, 313
Gynodioecious tropical tree, *Ocotea tenera*, 405
Gynodioecy, *Thymus* spp., 948

H

Haemodoraceae, flower development, 466
Hamamelidae, phylogenetic analysis, 891
Haplo-lethal alleles, theoretical population genetics, 192
Heat stress, protein trafficking, 23
Helianthus annuus, light detection system, 110
Hemerocallis fulva, contractile roots, 23
Histochemistry, tropane alkaloids, 492
Histology: *Myrsine laetevirens* seed 762, *Phacelia tanacetifolia* endosperm 753
Host density, *Microbotryum violaceum* transmission, 228
Host-plant phenotype, effects of *Microbotryum violaceum*, 236
Hybrid zone, *Artemisia tridentata*, 139
Hyphal-stage gene, 206

I

Immunological detection, inositol 1,4,5-triphosphate receptor, 750
Inbreeding, environmental effects, 98
Incompatible pollen tubes, development of RER, 738
Inflorescence development, *Scaphochlamys kunstleri*, 261
Inflorescences, lauraceous, Cenomanian, 668
Inositol 1,4,5-triphosphate receptor, immunological detection, 740
Intraspecific variation, salt tolerance, 127
Island populations, genetic diversity, 148
Isozymes, posttranslational modification, 504

J

Juniperus oxycedrus, reproductive success, 843
Juvenility, restoration by meristem culture, 695

L

Lauraceous inflorescences and flowers, Cenomanian, 668
Leaf position, *Glycine max* responses to short-term light reductions, 805
Lepidium, petal and stamen reduction, 65
Life history parameters, fluctuating asymmetry, 559
Light detection, *Helianthus annuus* chloroplasts, 110
Ligninase, 989
Lignotuber bud development, *Eucalyptus cinerea*, 979
Lipid accumulation in *Brassica napus* tapetal cells, 724
Localization: pectin 1, tropane alkaloids, 492
Lycopersicon esculentum, cuticle cracking, 14
Lysigeny, secretory cavity, 75

M

Male sterility, *Ocotea tenera*, 405
Malus domestica, pattern of axillary development, 283
Maternal nutrient environment, 338
Mating system: *Agalinis* spp. 418, *Ophiopogon xylorrhizus* 440
Mating-type linked haplo-lethal alleles, 192
Melaleuca quinquenervia, canopy held seeds, 648
Melanin, 989
Mendoncia, flower development and structure, 446
Meristem culture, restoration of juvenility, 695
Microbotryum violaceum: effects on pollen germination 221, fimbriae 175, hyphal-stage gene 206, mating-type segregation 192, nonmeiotic recombination 185, phenotypic changes in diseased plants 236, siderophore, rhodotorulic acid 213, theoretical population genetics 192, transmission 228
Microclimate, effects of woody plants, 1010
Microscopy, methods, 1
Microsporogenesis: effects of temperature 616, lipid accumulation in *Brassica napus* tapetal cells 724
Myrsine laetevirens, seed development, 762

N

NADH, effect on plasma membrane activity, 105
Nepenthes rafflesiana, nutrient stress, 996
Nicotiana tabacum, nitrogen metabolism, 121
Nitrate uptake rate, 305
Nitrogen metabolism, boron, 121
Nothofagus: stamen morphology 655, staminate flower ontogeny 906
Nuclear-encoded chloroplast proteins, 23

O

Oncidium, photosynthesis, 116
Onion, florogenesis, 57
Ophiopogon xylorrhizus, mating system, 440
Orchid, *Oncidium* photosynthesis, 116
Osmundaceae, vessels, 788
Ovary position, reversal in Haemodoraceae, 466
Ovulate cone scale evolution, 358

P

Paleobotany: Cenomanian lauraceous inflorescences and flowers 668, Cretaceous fossil fern, *Gleichenia chaloneri* 870, Late Cretaceous fossil Fagaceae 391, Paleocene Coryloideae 522, Triassic fossil conifer 358, Upper Cretaceous *Taxodium* 367, Upper Permian gigantopterid stem 1023
Panicum hemitomon, salt tolerance, 127
Parasite manipulation, *Microbotryum violaceum*, 236
Parent-progeny relationships, carbon isotope discrimination, 821
Paspalum, cytology and systematics, 153
Pattern formation, effects of fasciation mutation, 249
Patterns of petal and stamen reduction, 65
Pearl millet see *Pennisetum glaucum*
Pectin, localization, 1
Pennisetum glaucum, apomictic seed set, 89
Pennisetum spp., freezing tolerance, 599
Penstemon centranthifolius, reproductive biology, 331
Peroxidase, posttranslational modification, 504
Petal reduction, *Lepidium*, 65
Phacelia tanacetifolia endosperm development, 753
Phanerochaete chrysosporium, ligninases, 989
Photoperiod, effect on plasma membrane activity, 105
Photosynthesis: *Helianthus annuus* 110, variation along *Oncidium* leaf blade 116
Photosynthetic decline, *Triticum* flag leaves, 798
Phylogenetics, Hamamelidae, 891
Physiological ecology, young tree growth, 318
Physiology: *Agropyron cristatum* carbon isotope discrimination 821, *Arthrocnemum* indicum seed germination 313, 826, boron and nitrogen metabolism 121, destruction of fungal melanins 989, estimating freezing temperatures 513, *Glycine max* responses to short-term light reduction 805, light detection system 110, nitrate uptake rate 305, orchid hybrid photosynthesis 116, *Pennisetum* freezing tolerance 599, posttranslational modification of peroxidase 504, *Triticum* photosynthetic decline in elevated CO_2 798
Pinus palustris, needle growth alteration in elevated CO_2, 1002
Pistacia vera, pollen tube pathway, 566
Plectranthus madagascariensis, glandular trichomes, 31

Poaceae, quantitative leaf anatomy, 480
Podocarpus, cuticle micromorphology, 923
Pollen fertility, *Fraxinus lanuginosa*, 941
Pollen germination, effects of *Microbotyrum violaceum* spores, 221
Pollen tube pathway, *Pistacia vera*, 566
Pollinator selection, *Penstemon centranthifolius*, 331
Polygonum viviparum, clonal diversity, 606
Population biology: *Citrus limon* genotype identification 864, *Gaura neomexicana* demographic variability 853
Population genetics: *Cathaya argyrophylla* 351, theoretical, haplo-lethal alleles 192
Posttranslational modification of peroxidase, 504
Probe, localization of pectin, 1
Procambial initation, *Triticum* spikelet, 46
Pseudocalyx, flower development and structure, 446

Q

Quantitative genetics, *Penstemon centranthifolius*, 331
Quercus rober, growth along a gap-understory continuum, 318

R

RAPD markers, *Citrus limon* genotype identification, 864
*rbc*L plastid gene, Hamamelidae phylogenetic analysis, 891
Recombination, nonmeiotic mechanisms, 185
Reproductive biology: *Agalinis* 418, apomictic pearl millet 89, *Catananche lutea* 637, *Cucurbita pepo* 616, *Fraxinus lanuginosa* 941, inbreeding depression 98, *Juniperus oxycedrus* 843, *Melaleuca quinquenervia* 648, *Ocotea tenera* 405, *Ophiopogon xylorrhizus* 440, *Penstemon centranthifolius* 331, *Polygonum viviparum* 606, *Schizaea pusilla* spore germination 848, *Silene dioica* 958, *Sorbus aucuparia* isozymes 627, *Tectona grandis* 833, *Thymus* spp. 948, *Triplasis purpurea* 338
Reversal in ovary position, Haemodoraceae, 466
Rhodotorulic acid, extracellular accumulation, 213
Rhus hirta, dioecious flower development, 539
RNA, fungal fimbriae, 173
Root tubers, contractile, 23
Rough endoplasmic reticulum, *Brugmansia suaveolens* pollen tubes, 738

S

Salt tolerance: *Arthrocnemum indicum* 826, intraspecific variation, 127
Sasa senanensis, functional leaf phenotypes, 812
Sauromatum, pollen wall development, 744
Scaphochlamys kunstleri, inflorescence and flower development, 261
Schizaeaceae, vessels, 788
Schizaea pusilla, spore germination, 848
Schizogeny, secretory cavity, 75
Seasonal dynamics in reproduction, *Silene dioica*, 958
Seed bank, canopy, *Melaleuca quinquenervia*, 648
Seed development, *Myrsine laetevirens*, 762
Seed germination: *Arthrocnemum indicum* 313, 826, *Triplasis purpurea* 338
Seed heteromorphism: *Arthrocnemum indicum* 313, 826, *Catananche lutea* 637, *Triplasis purpurea* 338
Seedling growth, *Triplasis purpurea*, 338
Seed set, apomictic *Pennisetum glaucum*, 89
Seeds, synthetic, 968
Shade tolerance, 318
Shallot, florogenesis, 57
Shoot-mediated demand, nitrate uptake rate, 305
Siderophore, Rhodotorulic acid, 213
Silene acaulis, pollen germination, effect of fungal spores, 221
Silene dioica: *Microbotryum violaceum* transmission 228, reproductive biology 958
Silene latifolia, *Microbotryum violaceum* transmission, 228
Soil properties, *Artemisia tridentata* hybrid zone, 139
Soil temperature, effects of woody plants, 1010
Sorbus aucuparia, genetic analysis of zymograms, 627
Soybean see *Glycine max*
Spartina alterniflora, salt tolerance, 127
Spinacia oleracea, plasma membrane activity, 105
Spore germination, *Schizaea pusilla*, 848
Stamen morphology, *Nothofagus*, 655
Stamen reduction, *Lepidum*, 65
Staminate flower, *Nothofagus*, 906
Structure/function: *Arabidopsis thaliana* epicuticular wax 773, C_3, C_4 quantitative leaf anatomy 480, contractile roots 23, glandular trichomes 31, localization of *Erythroxylum* tropane alkaloids 492, Osmundaceae and Schizaeaceae vessels 788, surface layers of charophycean algae and bryophytes 780
Sunflower see *Helianthus annuus*
Synthetic seed technology, 968
Systematics: Haemodoraceae 466, Hamamelidae phylogenetic analysis 891, *Mendoncia* 446, *Nothofagus* 655, 906, *Paspalum* 153, *Podocarpus* cuticle micromorphology 923, *Pseudocalyx* 446, *Thunbergia* 446, Wollemi pine 160

T

Taxodium wallisii sp. nov., 367
Taxonomy, *Agalinis* spp., 418
Tectona grandis, reproductive biology, 833
Temperature effects on microsporogenesis, 616
Temperature stress, freezing injury in leaves, 513
Thelypteris palustris, vascular development, 275
Thunbergia, flower development and structure, 446
Thymus spp., gynodioecy, 948
Tobacco see *Nicotiana tabacum*
Tomato see *Lycopersicon esculentum*
Tracheid structure, evolution, 881
Transition matrix model, *Gaura neomexicana*, 853
Transposable elements, *Ustilago violacea*, 1018
Trichomes, *Plectranthus madagascariensis*, 31
Triplasis purpurea, reproductive biology, 313
Triticum: flag leaves photosynthetic decline 798, nitrate uptake rate 305, spikelet vascular development 46
Tropane alkaloids, localization, 492

U

Ultrastructure: *Blumeria graminis* extracellular matrix 575, cuticle cracking in tomato 14, *Glomus* spore and hypha 581, lipid accumulation in tapetal cells 724, localization of pectin 1, *Wolffia* 297
Ustilago violacea, transposable elements, 1018

V

Vascular development: barley leaf blade 716, *Thelypteris palustris* 275, *Triticum* spikelet, 46
Vector analysis, nutrient stress, 996

W

Wheat see *Triticum*
Wild-rice see *Zizania palustris*
Wolffia borealis, anatomy and ultrastructure, 297
Wolffia columbiana, anatomy and ultrastructure, 297
Wollemia nobilis, morphological features, 160
Wollemi pine see *Wollemia nobilis*

Z

Zizania palustris, hermaphroditic floret development, 550
